```

1 SYSTEM DESCRIPTION

This application is used for encrypting and decrypting text data in the Czech language. The system utilizes 12 different algorithms and fully supports Czech diacritics (ěščřžýáíéóňďť).

2 AVAILABLE MODULES

- `Encryptor` - Module for transforming plain text into encrypted form.
- `Decryptor` - Module for decoding received messages.

3 IMPLEMENTED ALGORITHMS

- **Letters backwards** - Reversal of character order.
- **Caesar cipher** - Shift in the Czech alphabet (41 characters).
- **Gronsfeld** - Advanced polyalphabetic cipher with a numeric key.
- **Binary and HEX code** - Conversion at the UTF-8 byte level.
- **Base64** - Standard encoding for data transmission.
- **Leet Speak** - Hacker substitution of characters with numbers.
- **Morse code** - Classic radio communication (simplified).

4 INSTALLATION AND EXECUTION

To download and run the application, Git and a Python 3 interpreter must be installed.

```
$ git clone https://github.com/susjantux/czech_cipher_app.git
$ cd czech_cipher_app
$ python czech_cipher_app.py
```

5 SYSTEM REQUIREMENTS

- Operating system: Multiplatform (Windows, macOS, Linux).
- Runtime environment: Python 3.x (Tkinter is included by default).
- Recommended editor: Visual Studio Code or classic Terminal.
- Font: Monospace (Consolas / DejaVu Sans Mono).
